Professional Service
for © CWS

CWS-CLOUD is the innovative IOT CLOUD professional industrial service. It is offered to all those users who need to monitor and interact in a professional way with their own processes, starting from a single variable up to whole systems. It gets data from classic consumption or production and it is able to calculate returns and/or any other things or situation with no limitation, not even geographical. It is directed to those who would rather, for easing reasons, to pay a small fee for using the service instead of taking care of a professional server and its installation, management and preservation.

The powerful technology IOT CEAM CWS, as is known, is completely available from the website and does not require any type of installation on devices that are used to access or manage all data. It can also be used on the go by tablet or smartphone, both by using website and by using the Android app (app downloadable for free from Google Play).

It is important to note that CWS is a truly open system and it is compliant with ISO16484. So it can be used with sensors and devices produced by Ceam, but even with third-party machines with no limitations, only requiring an extra protocol and connectivity analysis.

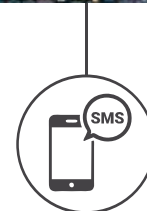

Main benefits of the CWS public cloud

- ✓ Carefree use
- ✓ Easy to use with any operating system
- ✓ No software installation, browser only
- ✓ No server to install and manage
- ✓ No updates needed
- ✓ On the go data access via mobile APP
- ✓ Maximum data sharing via APP

No local installation required

Use of web browser only or Android APP

CWS Cloud is the perfect solution for all those customers, no matter how small or large they may be, who wants to be in control in an easy, effective and professional way. It can also be shared to workgroups geographically distant with no drawbacks or unexpected cost, all these benefits make it possible to be focus on your own business.

✔ FUNCTIONAL

The features that the CWS CLOUD user have are all the same as an user or supervisor of a CWS owner setup. According to the terms of the contract that have been chosen the user can manage its own variables, it can ,manage alarms with no limits, it can organize synoptic or webcam, it can add or remove users. User can also insert other additional services, it can export data, it can view a record and much more. User can also use the integrated maintenance and scheduling package.

✔ TECHNICAL ASSISTANCE

Software support is included within the service CWS CLOUD, but it can also be extended to the hardware part if required.

Basic assistance is provided during working hours but it can be extended 24/7, if need be.

✔ PAYMENT OF A SIMPLE ANNUAL FEE

The basic CWS CLOUD formula (monitoring only) needs a one-off activation fee, then, a small annual fee for each variable acquired will be added.

The configuration of the interaction service (checking) is given by offer, a more personalized and comprehensive service can also be offered.

✔ ALARMS

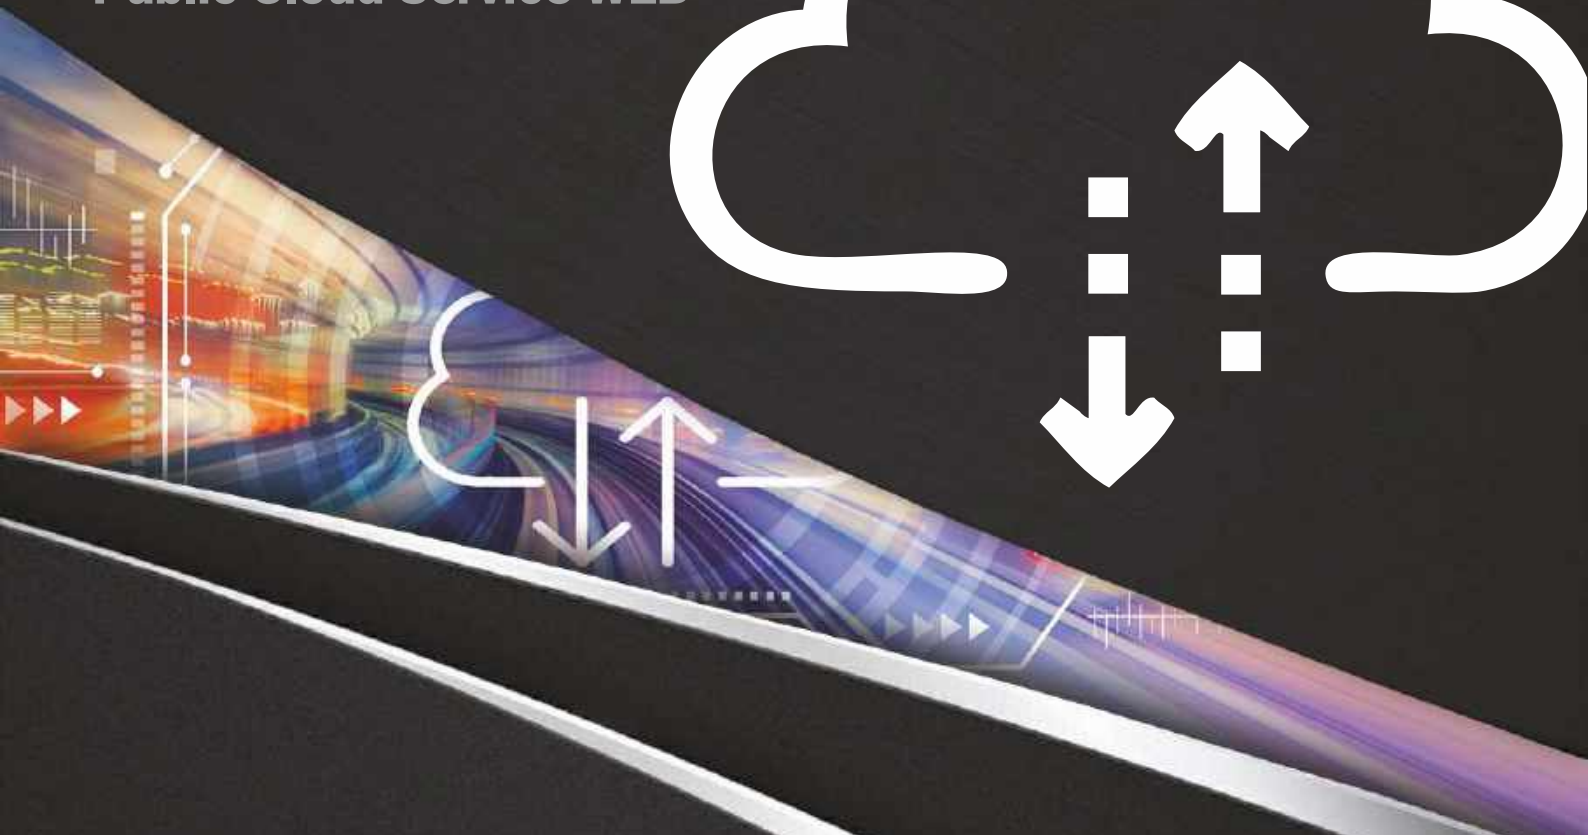

Alarms are notified free of charge by e-mail, otherwise sms can be purchased with prepaid packages starting from 50. Once again the benefit is that you do not need to buy devices and afford all the management charges.

Furthermore, the new black-box of CWOICE communication will be available by 2023, to have voice notification and interactive sms fully integrated on CWS and networked installation of course.
